The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Narrative

CASE NARRATIVE

Client: Weston Solutions, Inc.

Project: West Ammonium Explosion

Report Number: 280-41269-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

Sample Receiving

Four soil samples were received under Chain of Custody on April 23, 2012. The samples were received in good condition at temperatures of 2.3°C (Denver) and 3.1°C (Tallahassee).

The 8141B Organophosphorus Pesticide analysis presented in this report was performed at TestAmerica Tallahassee , 2846 Industrial Plaza Drive; Tallahassee; FL 32301, phone 850-878-3994.

No anomalies were encountered during sample receipt.

GC/MS Semivolatiles - SW846 Method 8270C

Each sample is analyzed to achieve the lowest possible reporting limits within the constraints of the method. Due to matrix interference, samples WFE10-01-51-20130421 (280-41269-1), WFE11-01-51-20130421 (280-41269-2), WFE12-01-51-20130421 (280-41269-3) and WFE12-01-52-20130421 (280-41269-4) had to be analyzed at a 4X dilution. The reporting limits have been adjusted relative to the dilution required. The laboratory noted that the sample extracts were viscous and analysis at a lesser dilution would jeopardize the integrity of the instrument.

Surrogate recoveries could not be reliably calculated for samples WFE10-01-51-20130421 (280-41269-1), WFE11-01-51-20130421 (280-41269-2), WFE12-01-51-20130421 (280-41269-3) and WFE12-01-52-20130421 (280-41269-4), because the extracts were diluted beyond the ability to quantitate recoveries.

No other anomalies were observed.

GC Semivolatiles / Pesticides - SW846 Method 8141B

No anomalies were observed.

GC Semivolatiles / Herbicides - SW846 Method 8151A

TestAmerica Denver's practice for the reporting of dual column data in packages requiring forms and /or raw data is to report the analytes/surrogates from both columns, and the preferred result for any given target analyte from the analyst selected column. The preferred results for target analytes and surrogates are reported as PRIMARY on the Sample Datasheets .

The designation of "primary" and "secondary" results in the data package does not necessarily correlate to "primary" and "confirmation" column results. The use of the designator "primary" in the LIM system indicates the "preferred" result, which may come from either column.

Case Narrative

Client: Weston Solutions, Inc.

Project/Site: West Ammonium Explosion

TestAmerica Job ID: 280-41269-1

Job ID: 280-41269-1 (Continued)

Laboratory: TestAmerica Denver (Continued)

Each sample is analyzed to achieve the lowest possible reporting limits within the constraints of the method. Due to the nature of the sample matrix and the presence of non-target peaks, samples WFE10-01-51-20130421 (280-41269-1), WFE11-01-51-20130421 (280-41269-2), WFE12-01-51-20130421 (280-41269-3) and WFE12-01-52-20130421 (280-41269-4) required a 10X dilution prior to analysis. The reporting limits have been adjusted accordingly.

Surrogate recoveries could not be reliably calculated for samples WFE10-01-51-20130421 (280-41269-1), WFE 11-01-51-20130421 (280-41269-2), WFE12-01-51-20130421 (280-41269-3) and WFE12-01-52-20130421 (280-41269-4), because the extracts were diluted beyond the ability to quantitate recoveries.

The LCS/LCSD associated with prep batch 280-170964 exhibited the LCSD percent recoveries above the QC control limits for 2,4-D at 121% (limits 32-115%), 2,4,5-T at 123% (limits 24-115%), Picloram at 109% (limits 10-100%) and surrogate 2,4-Dichlorophenylacetic acid at 111% and 114% (limits 31-105%). This is an indicator that data may be biased high. No detectable concentrations are present in the associated samples. The acceptable LCS analyte recoveries provide evidence that the laboratory is performing the method within acceptable guidelines; therefore, corrective action is deemed unnecessary. Associated data in the analytical report have been flagged “**”.

The Initial Calibration Verification (ICV) standard associated with analytical batch 280-171204 exhibited the % Difference (%D) value above the control limits for MCPP (+26%) on the confirmation column. The data have been reported from the primary column where the ICV was within control limits and the associated results ND.

No other anomalies were observed.

LC/MS / Glyphosate - SW846 Method 8321A

The analyst noted a deviation from the Standard Operating Procedure (SOP). Calibration points changed due to carryover. The linear range has been adjusted accordingly.

SOP	Cal points Used
100ug/L	100ug/L
200	200
400	400
1000	600
2000	800
4000	1000
	1500

A low level of Glyphosate was detected in the method blank associated with prep batch 280-171232. The value should be considered an estimate, and has been flagged “J”. Because the concentrations in the method blank were not present at levels greater than one half the reporting limits, corrective action was deemed unnecessary. Usability of the sample data is not compromised.

No other anomalies were observed.

General Chemistry - Percent Moisture

No anomalies were observed.

Definitions/Glossary

Client: Weston Solutions, Inc.

Project/Site: West Ammonium Explosion

TestAmerica Job ID: 280-41269-1

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
D	Sample results are obtained from a dilution; the surrogate or matrix spike recoveries reported are calculated from diluted samples.

GC/MS Semi VOA TICs

Qualifier	Qualifier Description
J	Indicates an Estimated Value for TICs
N	Presumptive evidence of material.
T	Result is a tentatively identified compound (TIC) and an estimated value.

GC Semi VOA

Qualifier	Qualifier Description
*	LCS or LCSD exceeds the control limits
D	Sample results are obtained from a dilution; the surrogate or matrix spike recoveries reported are calculated from diluted samples.
X	Surrogate is outside control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

LCMS

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A	
Residual Chlorine Checked.	N/A
